

BANKSTON

CARE INSTRUCTIONS

Caring for your Bankston product is simple and only requires a damp cloth with diluted, mild detergent to remove stains or fingerprints. For stubborn marks, a non-abrasive cleaning product can be used, but please do so sparingly.

In coastal areas, it is recommended to clean and dry your hardware regularly to remove salt spray which can dramatically increase the tarnishing and aging process. We suggest incorporating this into your regular cleaning routine.

Do not allow your Bankston product, particularly those that are finished with a lacquer, to come into contact with paint thinners or masking tape which may compromise the finish. We recommend always removing your door furniture prior to painting or undertaking maintenance activities to avoid damaging the finish or chipping powder coated products.

Never use solvents, scourers or abrasive cleaning products on your hardware. Doing so will compromise the finish of your Bankston product.
