

BRASS (LIVING FINISH)

Please note that finishes are indication only, these may look different on different screens and photos.

Refined

The brass base metal is polished to a high shine. Left un-coated, it will acquire a rich golden brown patina. The colour of weathered/aged finishes will also continue to evolve over time and can verdigris in certain climatic conditions. If specifying this or any other living finish, you should be aware that in most natural environments, verdigris is to be expected and results from the chemical reaction of salt spray, dust, or weather conditions on metal. If this is not the result you want on your hardware, please discuss with your specifier who can give you information on the advantages or disadvantages of other alternatives.

Refined/aged finishes should be cleaned regularly to remove grime and corrosive particles using a soft cloth and a mild solution of detergent and water. The frequency of cleaning will be dictated by how your hardware weathers in your particular environment. For best results, dry the hardware with a lint free, soft cloth after cleaning.

BRONZE LG2 (LIVING FINISH)

Please note that finishes are indication only, these may look different on different screens and photos.

Refined/Aged

The bronze base metal is polished to a high shine. Left un-coated, it will acquire a rich rose-golden brown patina, often showing the random grain structure of the bronze. The colour of weathered/aged finishes will also continue to evolve over time and can verdigris in certain climatic conditions. If specifying this or any other living finish, you should be aware that in most natural environments, verdigris is to be expected and results from the chemical reaction of salt spray, dust, or weather conditions on metal. If this is not the result you want on your hardware, please discuss with your specifier who can give you information on the advantages or disadvantages of other alternatives.

Refined/aged finishes should be cleaned regularly to remove grime and corrosive particles using a soft cloth and a mild solution of detergent and water. The frequency of cleaning will be dictated by how your hardware weathers in your particular environment. For best results, dry the hardware with a lint free, soft cloth after cleaning.

Faceplates and strikes from the SS Mortise Lock series, and cylinder barrels are not available in the Natural Bronze finishes. These products are only made from Brass as the base metal and are coloured to match as best as possible.

ELECTROPLATED

Please note that finishes are indication only, these may look different on different screens and photos.

Electroplated

Electroplating is the application of a metal coating to a metallic or other conducting surface by an electrochemical process.

Electroplated finishes should be cleaned regularly to remove grime and corrosive particles using a soft cloth and a mild solution of detergent and water. The frequency of cleaning will be dictated by your particular environment. For best results, dry the hardware with a lint free, soft cloth after cleaning.

Polished Chrome Plate
PCP

Satin Chrome Plate Velvet
SCPV

Satin Chrome Plate Brushed
SCPB

Nickel (Living Finish)

A layer of nickel on a polished/brushed surface. It will oxidize over time depending on atmospheric conditions and should be cleaned regularly to maintain the surface. This is not suitable for external use or coastal environments with salt spray.

**Polished Nickel Plate
(PNP)**

**Brushed Nickel Plate
(BNP)**

Copper (Living Finish)

A thick copper layer plated onto the brass base metal, left uncoated, which will acquire a rich red-brown patina over time. Not recommended for external use in coastal environments.

STAINLESS STEEL

Please note that finishes are indication only, these may look different on different screens and photos.

Refined

The Stainless Steel 316 base metal is polished to a high shine. A select range of Line SS pull handles are available in stainless steel and a select range of other products by consultation.

Stainless steel finishes should be cleaned regularly to remove grime and corrosive particles using a soft cloth and a mild solution of detergent and water. The frequency of cleaning will be dictated by your particular environment. For best results, dry the hardware with a lint free, soft cloth after cleaning.

**Stainless Steel Brushed
(SSB)**

**Polished Stainless Steel
(PSS)**

POWDER COAT

We offer a limited range of Powder Coated colours which are generally applied to brass as the base metal, and to a limited degree aluminium.

Whether you are looking to colour match to your aluminium or steel joinery or wanting to ensure your handles stand out, there is a colour to suit.

Black is a common request and bronze / brown options are becoming popular for external side joinery when paired with our Weathered Brass Dark (WBD) finish on the internal handles. This ensures your external 'living finished' products remain brown rather than potentially turning Verdigris, especially an issue in highly exposed coastal areas.

The selection is largely sourced from the Dulux and can be viewed in the link below. We use Dulux Duralloy & Electro colours, and our current inventory can be viewed below.

Dulux colours not listed in our inventory below can be sourced from Dulux but requires a minimum job lot and a surcharge will apply.

Powder coated finishes should be cleaned regularly to remove grime and corrosive particles using a soft cloth and a mild solution of detergent and water. The frequency of cleaning will be dictated by your environment. For best results, dry the hardware with a lint free, soft cloth after cleaning.
