

# COR 32-42-52

Door coordinators

The Ives COR Series is designed for use on pairs of doors when one door needs to close before the other. The active door lever, located nearest to the active stop, holds the active door open until the trigger mechanism is released by the closing of the inactive leaf.

## Features

- Equipped with adjustable override feature that allows the active door to close under extreme pressure
- Compatible with Flush Bolts
- Available in five sizes for variable door opening widths
- May not function correctly with swingclear hinges
- Made of aluminium
- Does not cover the entire length of the stop, so an FL filler bar can be provided to maintain architecturally clean lines

Warranties	
Mechanical	10 years
