

5300 Series Door furniture

The 5300 Series narrow stile furniture is designed for use in commercial applications, including exterior and interior doors for retail/shop front, educational, governmental, medical and public buildings. The narrow plate is ideal for use on narrow aluminium or timber stiles.

With a range of modern and contemporary lever designs, the 5300 Series will complement any décor. The handing mechanism of this Series allows the furniture to be handed on site, by simply rotation of the handle in the preferred direction of use prior to installing on the door.

Features

- Constructed of commercial grade, quality components including forged brass handles and extruded brass plates
- Heavy duty compression spring provides a smooth, positive return action of the lever and eliminates droop, extending the life of the product
- Symmetrically designed levers are able to be handed on site within seconds, with a simple 180° rotation of the lever in the preferred direction of use prior to installation
- Designed for use with Legge 995 narrow stile mortice locks, the 5300 Series can also be supplied to suit Legge 990MF mortice locks

Fixing	Back to back. External plates concealed fixing. Screws supplied with exterior plates only. 75mm M4 screw	OPENING IN	
Materials	Levers — forged & extruded brass Plate — extruded brass	Outside	

Testing and Compliance

Fire Rating:

Successfully tested on fire door assemblies in accordance with AS1905 Part1: Fire resistance doorsets. Check with fire door manufacturer prior to installation.

Accessibility: Compliant to the AS 1428:1-2009 Design for Access and Mobility

Caution: When door closers are installed and adjusted to meet reduced opening force requirements, there may be insufficient power to reliably close and latch the door, depending on prevailing operating conditions.

ALLEGION

Handing guide

Note: In areas of high wind pressure and/or air conditioning pressures, the LCN Automatic Door Operators are recommended.

Lever handing

Handing is as simple as a turn of the handle.

Handing of the lever is as simple as rotating the handle 180° as illustrated. The spring simply needs to be guided into the channel once the handing has been determined.

Note: For asymmetrically designed levers, handing can not be reversed and will require left or right handing to be specified when ordering.
